# Add Traffic

**Add Traffic** adds extra traffic quota to a user, or removes it. It is free (no charge).

1. Select the user and click **Actions → Add Traffic**.
2. Choose the **Target**: *Download + Upload*, *Download* or *Upload*.
3. Enter the **Amount in MB** (1 GB = 1024 MB). Use a negative number to remove traffic.
4. Add a **Comment** and click **Submit**.

- The traffic only counts if the user's profile limits the same type (total, download or upload).
- If the user had already used more than the quota, the added amount starts from zero.
- The user is disconnected if online, so the new quota applies. The change appears in the user's **Quota** and **History** tabs.

> To reset only **today's** counters (daily quota), use **Reset Traffic** on the user's Overview (needs *Users - Reset Daily Quota*).

*Required permission: Users - Add Traffic*
