Cards System Overview

The **Cards System** creates prepaid cards (vouchers) that you print and sell through shops and resellers. Cards are created in **series** (batches); every card has a serial number and a PIN.

Card types

Type	What is printed on the card	How it is used
Refill Card (recharge card)	PIN, serial number, value, expiration date	Redeemed to renew an existing subscriber, or to top up a balance. See Using Refill Cards.
Prepaid User (login card)	Username and password (plus PIN and serial)	The username and password are the login for PPPoE or Hotspot. The subscriber account is created and activated the first time the card logs in. See Prepaid User (Login) Cards.

Who pays and when

- The manager who **generates** the cards pays for them **at generation**, from their balance:
  - Refill cards: card value × quantity.
  - Prepaid User cards: the manager's price for the selected profile × quantity.
- Using a card later does not charge any manager again.
- Suspending, deleting, transferring or expiring cards does **not** refund the money.

Where to find it

- *Cards System* in the menu: the list of series (Cards Series List).
- *Actions* → *Generate Cards*: Generating Cards.
- *Actions* → *Cards Designer* and *Download (PDF)*: Designing and Printing Cards.
- *Reports* → *Cards Usage* and *Cards Transfer Log*: Transferring Cards and Card Reports.
