Login As

Login As lets you open the panel as another manager, without their password, to see exactly what they see. It is useful for support and for checking permissions.

1. Open the account menu (top right) → **Login As...**
2. In **Manager to login as**, type at least 2 characters and select the manager.
3. Click **Login**. The panel reloads as that manager.

- To return to your own account, **log out** and log in again.
- Logging in as the *admin* account is not allowed.
- Every Login As is recorded in the system log under your name.

> This permission gives full access to other managers' accounts. Give it only to trusted staff.

Required permission: Managers - Login As (Dangerous!)
