Manager Permissions

What a manager can see and do is controlled by their **Security Group** (shown as *Permission / ACL Group*). Permission groups are created and edited under *Settings → Permission Groups*; each permission is described on the **Permission Groups** page of the Settings chapter.

Tips

- Create groups by role, for example *Administrator*, *Super Reseller*, *Normal Reseller*, *Support*.
- Give permissions marked *(Dangerous!)*, such as *Users - Edit Advanced Fields (dangerous!)* or *Managers - Login As (Dangerous!)*, only to trusted staff.
- Restrict powerful groups to specific managers, so that resellers can't give them to their sub-managers.
- Use Login As to check what a manager sees with their group.

Permissions used in this chapter

Permission	Allows
Managers - Index	Open the Managers list and details page.
Managers - Index (All Managers)	See all managers, not only your own tree.
Managers - Create	Create managers.
Managers - Edit / Update	Edit managers.
Managers - Rename / Managers - Delete	Rename / delete managers.
Managers - Deposit Money / Managers - Withdraw Money	Move balance to / from sub-managers.
Managers - Self Deposit	Top up your own balance.
Managers - Export to Excel	Export the list.
Managers - Show Invoices / Receipts / Journal	See the tabs on the details page.
Managers - Login As (Dangerous!)	Log in as another manager.
Managers - System Administrator	Full access to everything, including advanced manager settings.
