System Log

Log → System Log is the audit trail of the panel: who did what, and when. Every important action is recorded: logins, user changes, activations, deposits, profile and NAS changes, settings, exports and more.

- Columns: **Date, Event, Manager** (who did it), **Description, IP**.
- The **Search** box searches event, description and IP, for example a username.
- Filters: **Manager**, **Event** (only events that exist in the log are listed), **From / To Date**.
- Managers see the actions of themselves and their sub-managers; system administrators see all.
- Export to Excel is available.

Useful events

Event	Meaning
manager/login, manager/loginAs	Panel logins and Login As.

Event	Meaning
user/create, user/update, user/delete, user/rename	User changes.
user/activate, user/extend, users/cancel	Activations, extensions and cancellations.
user/profile, user/expiration, user/disconnect, user/enable, user/disable	Profile changes, expiration edits, disconnects.
manager/deposit, manager/withdrawal, user/deposit, user/withdraw	Money movements.
bulkChanges	Bulk changes.
profile/*, nas/*, settings/*, service/*	Changes to profiles, NAS, settings and services.
security/violation	Someone tried an action without permission.

> To find out who changed a user, search for the username. Long descriptions are shortened.

Required permission: Reports - System Log
