Usage Notifications

Usage notifications warn subscribers when they have used a certain percentage of their traffic quota, for example "You have used 80% of your quota". Open *Profiles → usage notifications*.

Fields

Field	Description
Profile	The package the notification is for.
Counter to Check	**Total Traffic Limit** (the package quota) or **Daily Traffic Limit**.
Usage Threshold (%)	Send the notification when the user has used more than this percentage, for example 80.
Notify via SMS / SMS Message	Send this text by SMS (the user needs a phone number).
Notify via Telegram / Telegram Message	Send this text by Telegram (the user must have linked the Telegram bot).
Notify via Email / Email Template	Send an email template. Templates can use {username}, {firstname}, {lastname}, {expiration}, {profile} and {balance}.
Notify via Webhook / Webhook Url (GET)	Call your URL; user_id, counter and threshold are added to it.

Good to know

- Notifications work only for profiles with a traffic limit, and are checked for **online** users.
- Each user receives each notification **once per subscription period**. It can be sent again after the next activation.
- SMS and Telegram messages are sent exactly as written (no placeholders).
- Create several notifications for one profile for several levels, for example 80% and 95%. Use **Copy** to duplicate one with a new threshold.
- SMS, email and Telegram must be configured in *Settings*.

Required permission: Managers - System Administrator
