Welcome to SAS Radius

SAS Radius (SAS4) by Snono Systems is a complete subscriber management and billing system for Internet Service Providers. It is a RADIUS server (Authentication, Authorization and Accounting) that works with your routers, together with a web panel for your staff and resellers, a portal for your subscribers and mobile apps.

Try it on the demo server: demo4.sasradius.com (username `admin`, password `admin`).

What SAS Radius does

Area	Features
Subscribers	PPPoE and Hotspot users, activation and renewal, extensions, add-ons, MAC lock, static IPs, online users, disconnect, live traffic, support tickets
Packages	Speed, duration and quota per profile, Fair Usage (FUP), expired-user pools, time-based policies, burst, IP pools, custom RADIUS attributes
Resellers	Unlimited levels of managers and sub-managers, balances, price lists, commissions, debts, reward points, permission groups
Sales	Prepaid cards (refill and login cards), card design and printing, invoices, postpaid billing, online payment gateways
Routers	MikroTik, Cisco, Huawei, Ubiquiti, Nokia, netElastic and other RADIUS-capable NAS
Communication	SMS, email, Telegram bot and mobile app notifications, announcements
Reports	Activations, profits, sessions, traffic, online history, audit log, login errors
Administration	Backups (local and Google Drive), updates, bulk changes, import, multi-site branding, dashboards

Where to start

- New installation: read System Requirements and the Installation chapter.
- First setup: follow Quick Start Guide.
- Learn the screens: Tables and Controls and Main Menu Overview.
